

ARTICLE 3 — EASA SAFETY CHARTER

Pre-Flight Safety Checklist

Complete all items before passengers board. Sign off mentally on each point.

- ☐ Emergency and survival equipment list available for immediate communication to rescue centres (NCO.GEN.130)
- ☐ Aircraft documentation is current (Certificate of Airworthiness, insurance, maintenance release)
- ☐ Passenger briefing completed before boarding
- ☐ Weight & balance and performance calculation completed
- ☐ First-aid kit accessible and within expiry date

ARTICLE 2 — EASA SAFETY CHARTER

Pilot Code of Conduct

By listing a flight on Gallebo you confirm you have read and will follow this code.

1. You are the sole decision-maker on the aircraft — never let passenger expectations override your judgement
2. Inform passengers the day before about weather forecast and possibility of cancellation
3. You may refuse to board any passenger at any time, for any reason, without justification
4. Only direct costs (fuel, landing fees, rental) are shared — the pilot pays their proportional share; no profit is permitted
5. Always confirm the aircraft type with passengers before the flight; notify them of any change
6. Ensure the aircraft is insured for private non-commercial flights with passengers
7. Inform passengers that toilets are not available on board

Passenger Handling — Stage by Stage

Follow each stage to ensure passengers are well-informed and the flight runs safely.

After booking	• Call or message the passenger to introduce yourself • Explain the cancellation policy (weather, technical, etc.) • Give logistics advice: sunglasses, transport to airfield, max luggage weight
Day before	• Share the weather briefing — cancel early if conditions are marginal • Confirm the passenger will arrive on time • Repeat logistics reminders
Before engine start	• Walk the passenger through the planned route on a map • Explain what passengers should and should not do during the flight
Passenger briefing (in aircraft)	• Seats, seatbelt, seat position, door locking/unlocking • Instruments & controls: rudder and yoke are never to be touched • Radio silence during pilot transmissions, take-off and landing • Emergency landing procedure • How to signal stress or airsickness — hand the passenger a sickness bag • How passengers can support flight safety
